Leading Indicators

Prevedere Economist team has handpicked this set of indicators that they consider critical leading signals for the economic recovery following this economic downturn

This dashboard provides businesses with the key "leading indicators" that typically turn early in the business cycle, and therefore provide clues to a coming change in the economic environment

Indicators are grouped into categories and each page in the dashboard represents a category.

Indicator Selection Methodology

Specific indicators become valuable for an industry to watch based on three criteria:

Historical leading reliability: Some key indicators have value because of their consistent ability to signal economic downturns and recoveries throughout past business cycles

Relevance to current crisis: We have selected some indicators based on their unique relevance to this COVID-19 health crisis. Some indicators will highlight impacts that are especially unique to the social distancing and mandated nonessential business closings that are having an a particular impact on the economy in the near term.

Frequency and timeliness of data: Many traditional government data sources publish data on a monthly basis or even less frequently. And while some of these monthly datasets are still valuable to watch for economic reasons, we try to pair them with other, more frequently released datasets that will help signal current conditions faster.

All Categories: Look at these indicators to understand how they are placing upward or downward pressure on the economy.

Anatomy of the Dashboard

Data Grouped by Logical Categories

We have organized our leading indicators into fours. These categories are meant to be a logical grouping that an economist would look for when studying an industry or an entire economy.

See the Data How Our Economists See It

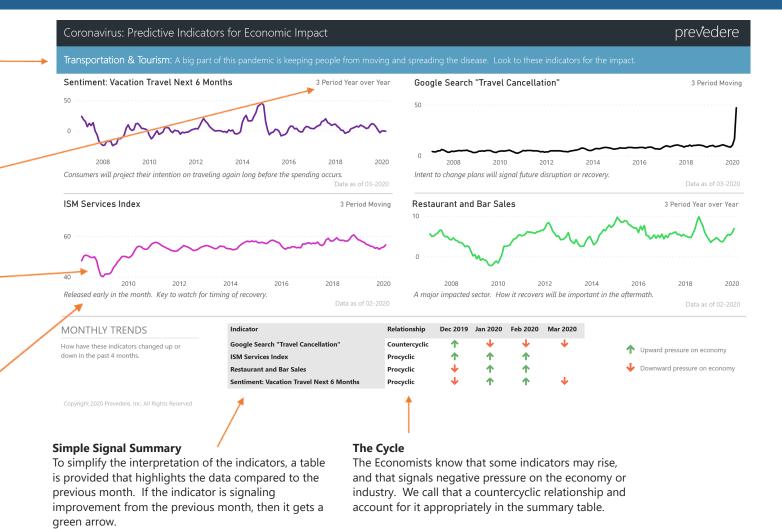

Our economists have determined for the reader what the best frequency and calculation the data should be viewed at if you are looking for real signals of economic change. If you look at data too granularly (such as by the hour, or day) the signal can get lost in the volatility. So we utilize moving averages and growth rates to help isolate sustained trends.

Historical Context

We want to show enough data history, when available, to compare to the "Global Financial Crisis" in 2008-10. This should help a reader visually compare the recent negative movements to prior cases where the indicator showed recessionary or weaker conditions.

The Reason for the Indicator

Under each indicator there is a description of why that indicator was chosen by the Economist team as a top indicator to watch.
